

Mako

Carrier board for up to 8 TB of high-speed M.2 NVME SSD storage

Features

PCIe Gen3 x8 interface Configurable as high-speed SSD RAID Switch-based adapter Up to four "M" key M.2 NVME SSDs for up to 8TB data storage Up to 6 GB/s throughput

Description

The Mako is a PCI Express SSD carrier board that can be configured as an NVMe RAID, for up to 8TB of storage capacity with read / write speeds of up to 6GB/sec. The PCIe Gen3 x8 switchbased board can accomodate up to four high-speed M.2 NVME SSDS.

Length options for SSDs are 42, 60, 80 or 110mm (respectively, Type 2242, 2260, 2280, or 22110). The Mako occupies a half-length, full-height PCIe x8 or larger slot in the host computer.

The Mako is straightforward to install and use as a high-speed, highcapacity disk drive in Windows, Linux or MacOS. Configuration methods are provided to set up the SSDs as a software RAID.

Adding a populated Mako board to a Windows, Linux or MacOS computer can provide immediate and significant performance improvements for many applications. Software development, simulation, graphic design, animation, video editing, financial analysis, and gaming are just a few of the applications that can benefit.

Applications

Video editing

High-speed recording and playback with any data source

Build servers

Database servers

Simulation

RAID storage

Any other disk I/O intensive application
